

Alliance for Biomedical Research in Europe

EORTC and ESE join the Alliance for Biomedical Research in Europe

The European Organization for Research and Treatment of Cancer (EORTC) and the European Society of Endocrinology (ESE) join the Alliance for Biomedical Research in Europe (BioMed Alliance).

Their expertise and fully support will help BioMed Alliance to provide recommendations for policy and decision makers on facilitating and improving biomedical research in Europe. The BioMed Alliance looks forward to collaborating with like-minded societies. Working together, we will be able to greatly promote and foster European excellence and innovation in biomedical research.

The EORTC is an independent research organization dedicated to investigator driven clinical trials and translational research and has not only an impressive track record in establishing 'state-of-the-art' treatments but also in ensuring that new cancer agents are developed and tested efficiently with the aim of minimizing delays between laboratory discovery and their therapeutic benefit for patients.

The ESE is a learned society for healthcare providers and researchers within the field of endocrinology. Established in 2006, ESE aims primarily to implement and facilitate programmes that directly benefit the endocrine field and those within it, ultimately to improve the care provided to patients with hormonal disorders.

BioMed Alliance provides a platform for our members to speak with a unified voice and interact with EU policy makers on key topics for European biomedical and health research.

President: *Colm O'Morain*
Past-President: *Karin Sipido*
Treasurer: *Wilfried Ellmeier*
Board Member: *Ulf Smith*
Board Member: *Françoise Meunier*

Board Member: *Gustave Moonen*
Board Member: *Ulrich Jager*
Board Member: *Jean-Paul Sculier*
